Performance Evaluation Form

for

Stephen Landry

Detailed below is our evaluation of the performance of this student at our cable splicing school. The ratings are based on our observations, applying over 40 years of field experience working and training others to construct reliable high voltage cable splices and terminations.

If a "Below Average" rating is given, it indicates that the splicer's work is acceptable, but that he demonstrates a need for additional exposure to that detail to become more proficient. If a "Needs Further Training" rating is given, it indicates that the splicer has not demonstrated that he understands or seems to have the capability to be allowed to work on high voltage cable projects independently, without direct supervision in the detail noted.

Bid 7549649A1 – Electrical/Electronic Maintenance Repair (MPA #41)

14.3 In 2004, Robert F. Audet, Inc. installed a 5 KV transfer switch at the University of Rhode Island to support the water distribution system from an existing 5 KV generator. Since that time, RFA has maintained and tested this installation as required.

Although we are aware of one other 5 KV generator (also at URI) there are not that many situations that would call for transfer equipment at this voltage. However RFA is familiar with the operation and technology involved in such installations. We would also point out that in terms of cabling and termination the equipment and methodology are not unlike other aspects of the medium voltage industry.
