Testimonial: "In September 2014, Newport Renewables completed a 33 kW roof mounted solar photovoltaic (PV) system for the Alan F. Flynn Jr. Academic Building at Rocky Hill School. Newport Renewables was a pleasure to work with. Their team executed the project in a professional manner, according to schedule and without any disruption to school activities. The installation process was well organized, and the construction area was safe and clean throughout the project. Upon completion, there was no trace of the construction activities that had taken place around the building, as Newport Renewables took extra precaution to protect the building and landscaping during the installation. Newport Renewables' professionalism, timely completion, and the performance of the solar PV system were exceptional. I would not hesitate to recommend Newport Renewables to others." PROJECT AND MATERIALS DESCRIPTION

The ground mounted solar PV system will be comprised of a ground mounted racking assembly, solar photovoltaic modules, wiring, inverters, conduit, electrical enclosures and a chain-link fence. The materials used will all be US manufactured. The materials will be purchased through RI based vendors whenever possible.

The ground mounted racking system will be a SnapNrack Series 200 ground mount system, using US extruded aluminum rails, stainless steel hardware and attachment components, and US forged galvanized steel pipe. The racking system will be anchored with poured concrete footings. SnapNrack racking systems come standard with a 10 year product warranty.

US manufactured SolarWorld solar modules will be installed on the racking system. SolarWorld solar modules are manufactured in Oregon, and are among the most well known and reliable solar modules on the market. Newport Renewables has installed thousands of SolarWorld modules over the last 5 years and has never experienced a failure. SolarWorld modules come standard with a 10 year product warranty, and a 25 year power production warranty.

US manufactured Solectria inverters will be utilized to convert the DC electricity to AC electricity. Solectria inverters are manufactured in Lawrence, MA. Solectria is a leading inverter manufacturer, with thousands of megawatts of inverters deployed around the world. Solectria inverters come standard with a 10 year product warranty.

The electrical panels and enclosures utilized will be US manufactured by Eaton, a leading manufacturer of electrical devices and enclosures.

The chainlink fence will be made of US forged galvanized steel pipe, chainlink fencing and fittings.

The balance of system components such as wire and conduit will be US manufactured.

The solar PV system will be designed to provide a portion of the school's required electricity during daylight hours. An interconnection agreement and net-metering agreement with National Grid will be obtained in order for the school to net-meter, meaning produce a portion of its own power, and be credited by the utility in the event of production exceeding consumption.
